

# User Guide – Basic Meter Data Report

This is a reference guide to assist you with understanding the information that's in your meter data summary report.

The summary report contains;

- Summary Table
- Graph of Energy Flows

Please refer to the below key terms and their definitions to understand the summary report.

KEY TERM	DEFINITION
NMI	National Meter Identifier. This is the 10 digit code we use to identify your site's electricity supply.
Meter Serial Number	This is the serial number
UOM	Unit of Measure. This how we measure the amount of energy you are using
kWh	Kilowatt hour. This is the unit of measure for your electricity supply.
General Supply	This refers to the register on your meter that records how much energy you are using for your main supply. All meters will have this register.
Controlled Load	This refers to the register on your meter that records how much energy you are using for specific supplies that are wired into this meter, for example, electric hot water systems. Not all meters have this register.
Generation	This refers to the register on your meter that records the amount of energy you are generating and putting back into the grid.

## Summary Table

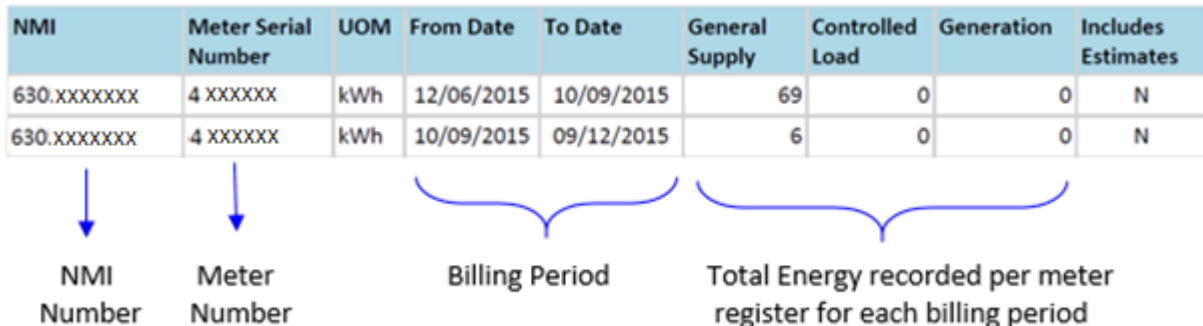

This includes the total energy consumption and generation associated with your NMI aggregated under the categories of:

\* General supply

\* Controlled Load

\* Generation

NMI	Meter Serial Number	UOM	From Date	To Date	General Supply	Controlled Load	Generation	Includes Estimates
630.XXXXXXX	4 XXXXXX	kWh	12/06/2015	10/09/2015	69	0	0	N
630.XXXXXXX	4 XXXXXX	kWh	10/09/2015	09/12/2015	6	0	0	N

## Energy Flow Graph

This graph provides a pictorial summary of the information contained in the summary table. You can compare your electricity use of each billing period, and identify periods where you are using more energy.
